WHAT IS WEB DESIGN?

WHAT IS WEB DESIGN?

Web design is the process of creating the look, layout, and usability of a website.

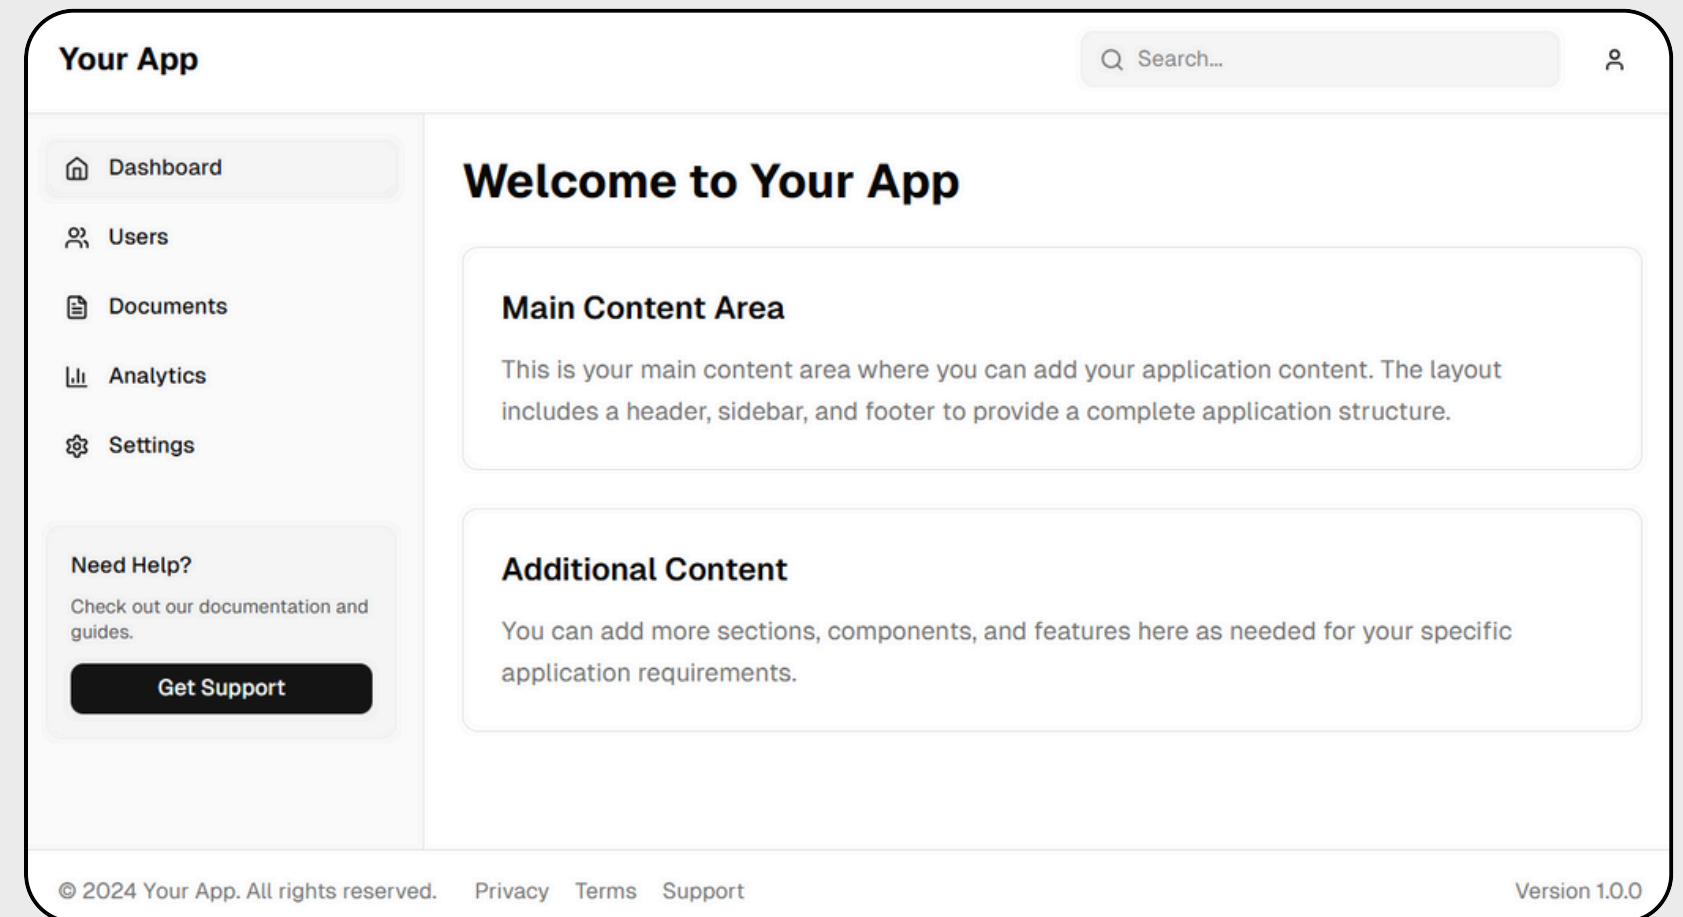

MAIN PARTS OF WEB DESIGN

- 01 Layout & Structure
 - 02 Visual Design
 - 03 Content
 - 04 Navigation & User Interface
 - 05 User Experience & Responsiveness
- 

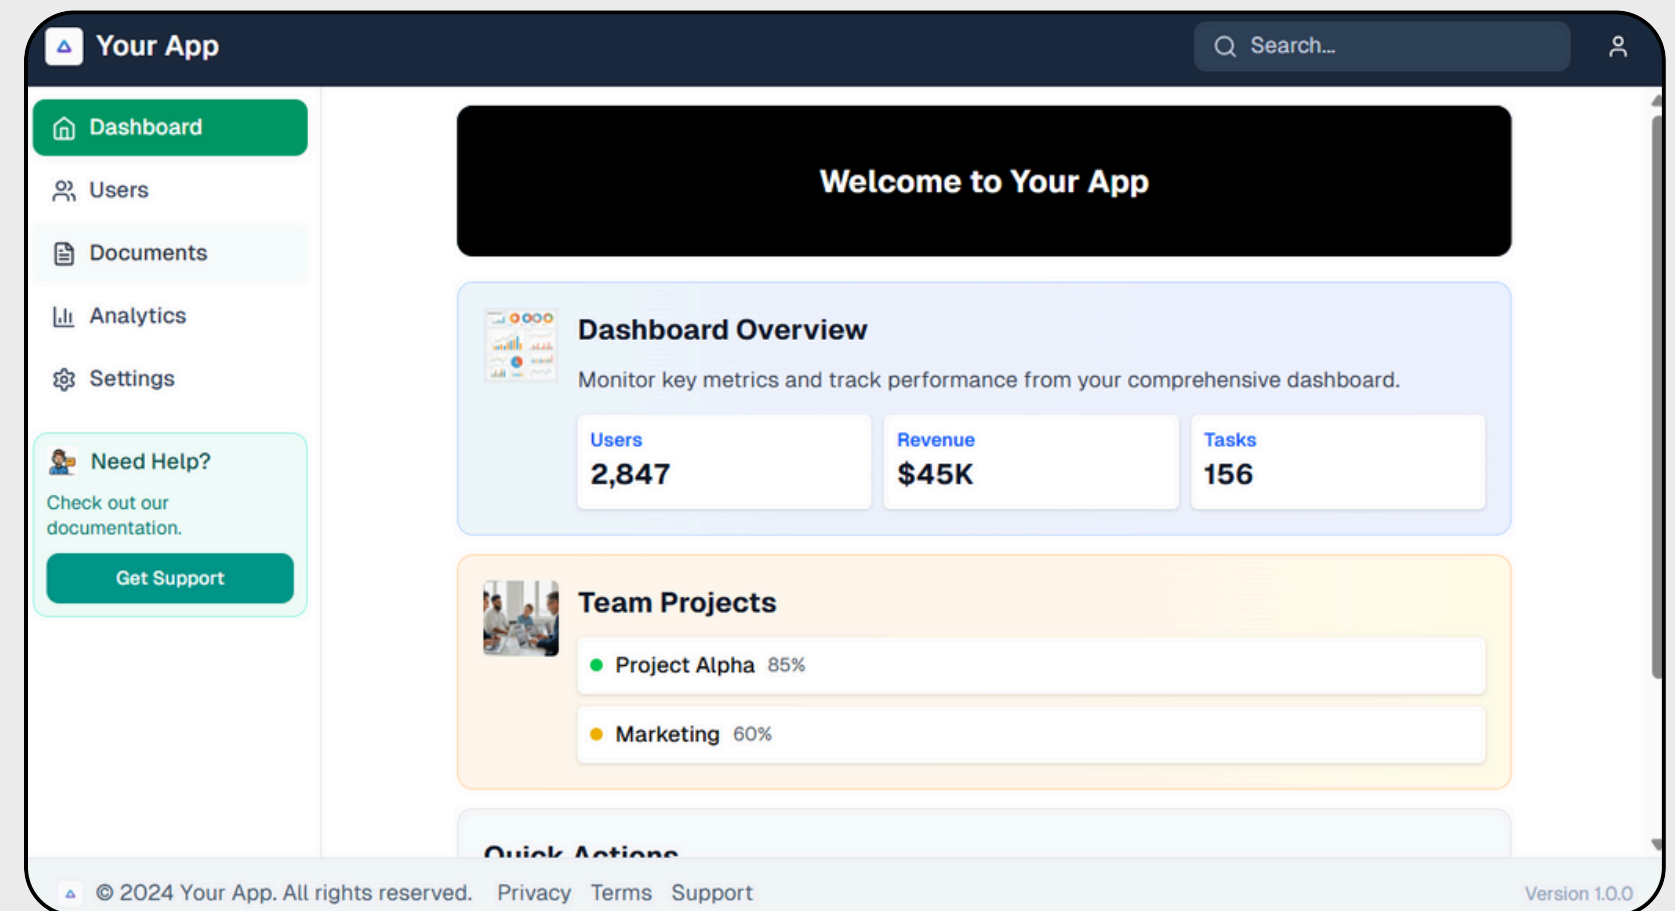

LAYOUT & STRUCTURE

The structure of the website (header, footer, sidebar, content area).

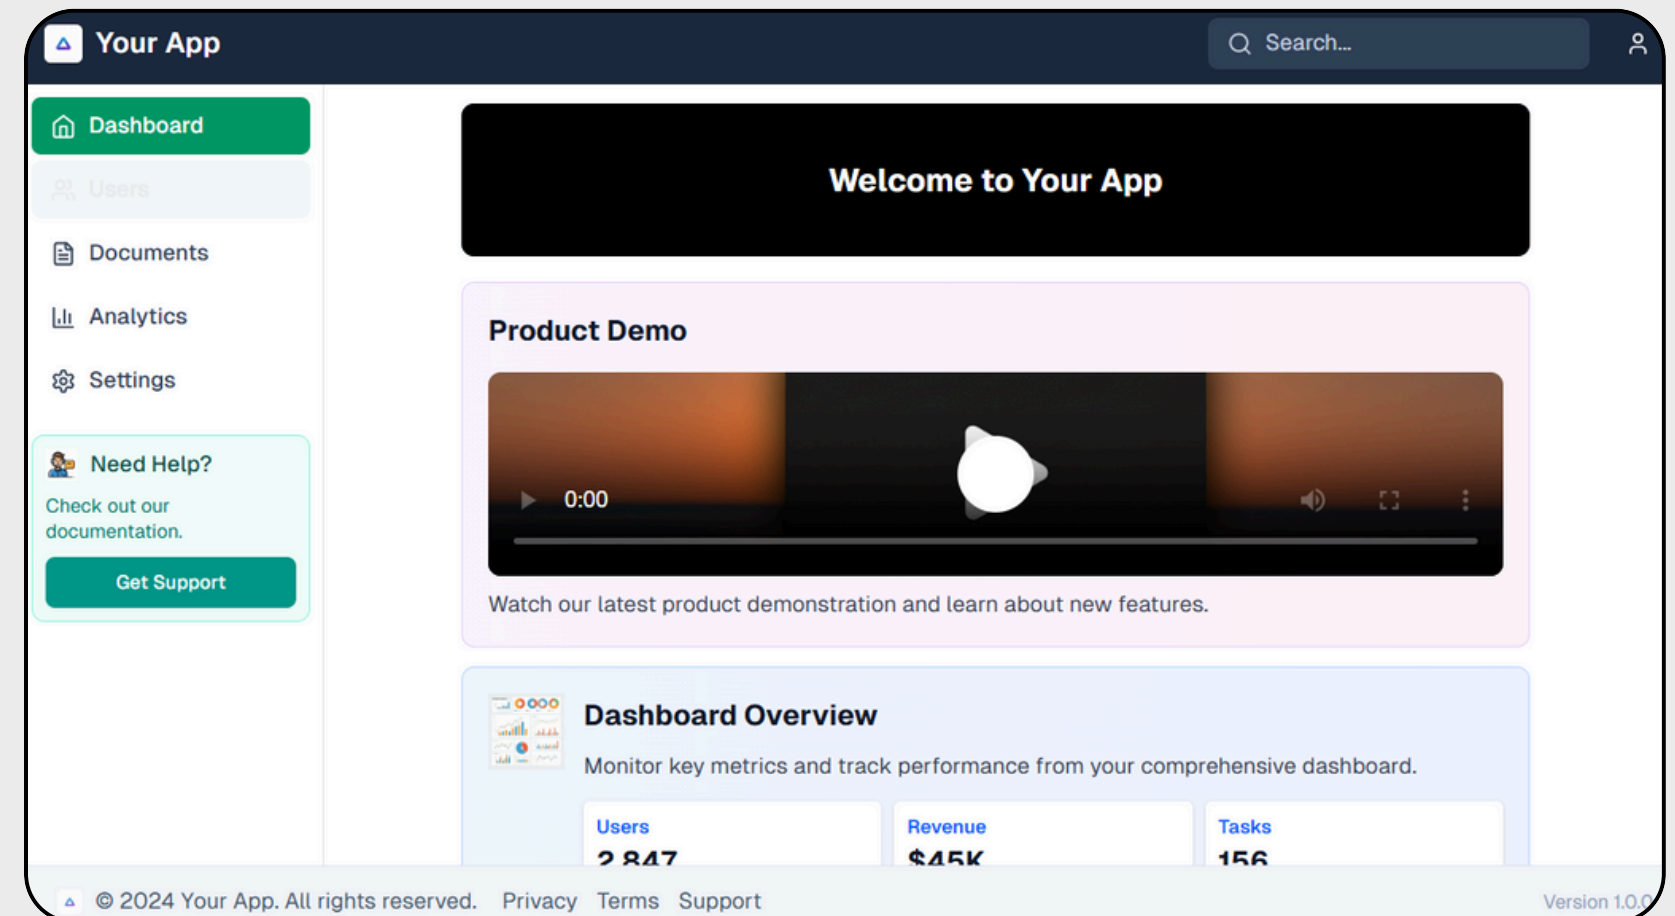

VISUAL DESIGN

Colors, fonts, graphics, and images that create the look.

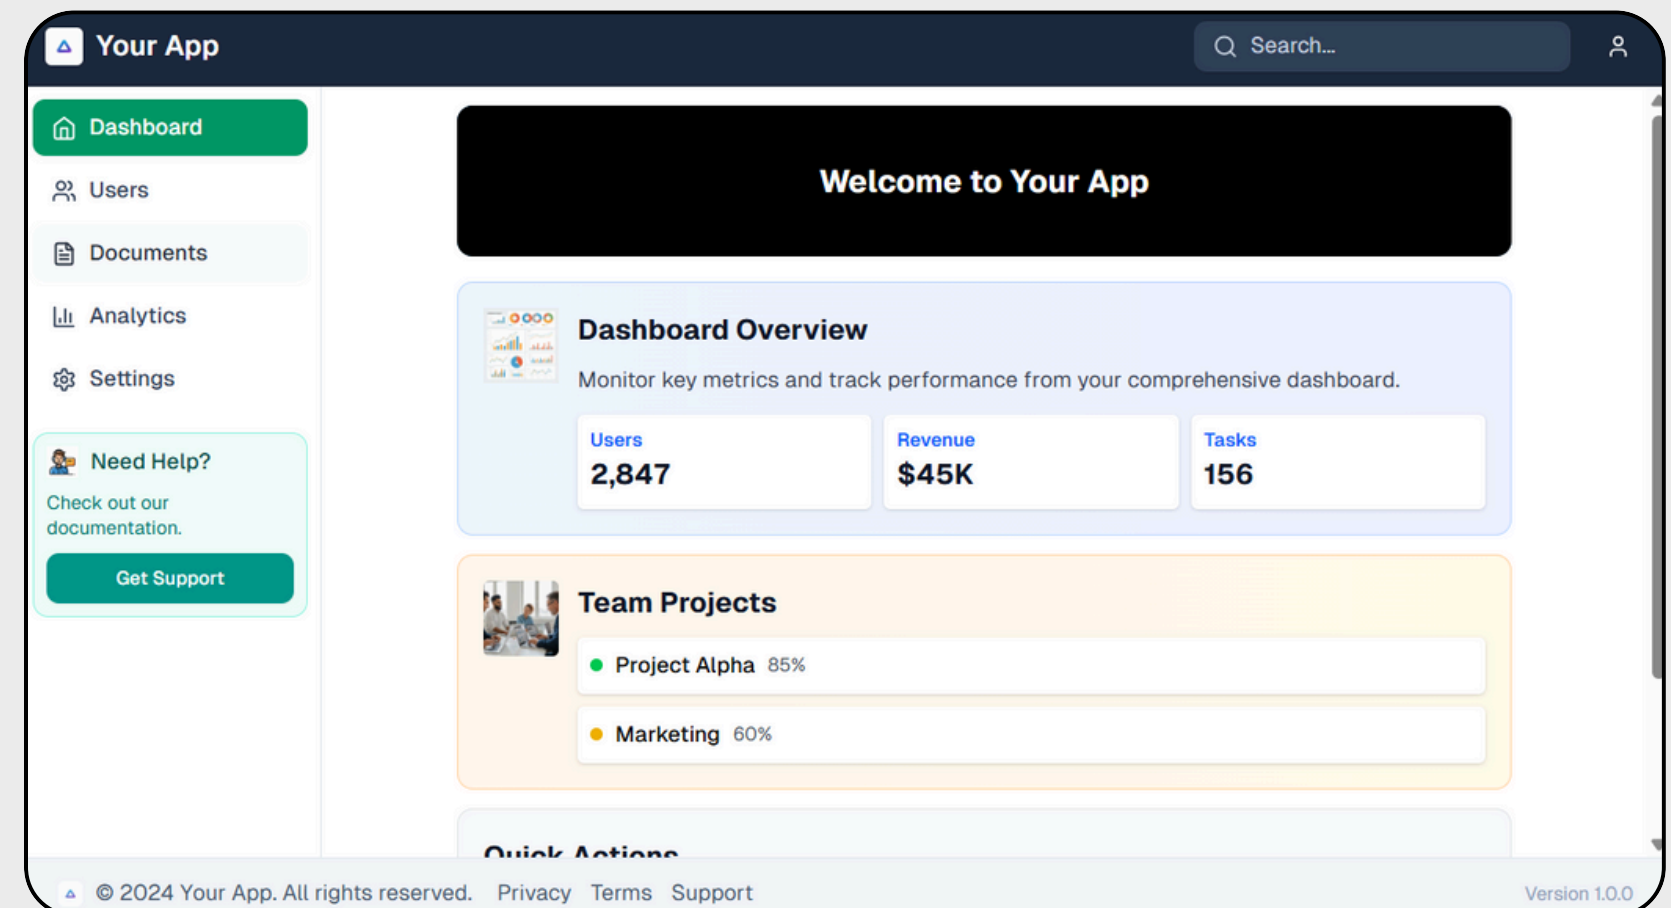

CONTENT

The text, videos, and information shown on the website.

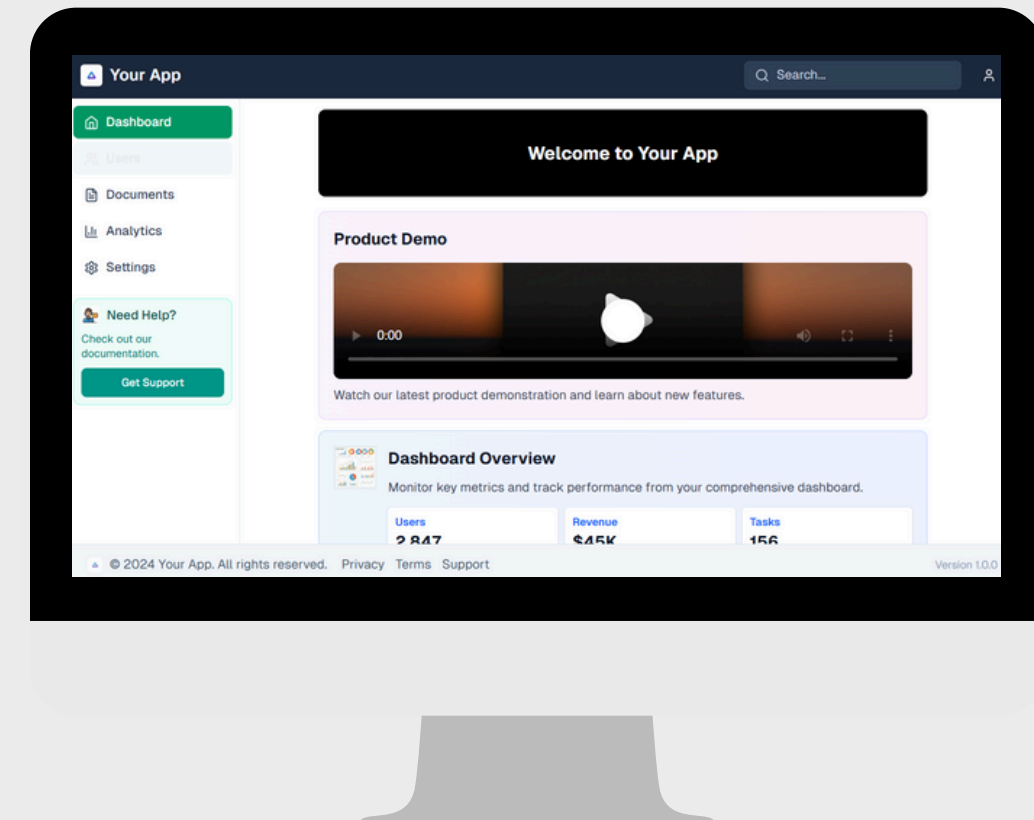

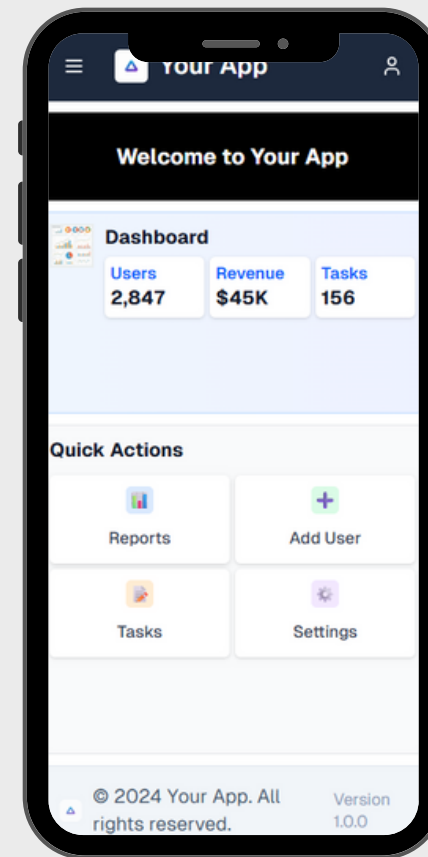

NAVIGATION & USER INTERFACE (UI)

Menus, buttons, and forms
that users interact with.

USER EXPERIENCE (UX) & RESPONSIVENESS

The design of interactive elements like forms, buttons, and sliders.

THE LATE 80S: SPARK FOR THE WEB

KEY EVENT (1989)

- March 1989: Tim Berners-Lee, a British scientist, wrote the initial proposal for the World Wide Web (WWW).
 - Proposed a “hypertext project” → a “web” of documents viewed through a browser.
- 

WHERE IT STARTED

- Berners-Lee worked at CERN (European Organization for Nuclear Research) in Geneva, Switzerland.
 - CERN connected 17,000 scientists from universities across 100+ countries.
 - Needed a reliable communication system for sharing files & research.
- 

THE PROBLEM

- Scientists struggled to:
 - Effortlessly find files
 - Share information across networks
 - Berners-Lee's solution: a universal system for linking & accessing data.
- 

DESIGN “DARK AGES”

- Late 80s design = barebones and limited
 - Work done on pixels, numbers, letters, tables
 - Shapes & outlines formed on dark screens
 - Known as the “Dark Ages of Design.”
- 

THE SPARK BEFORE THE BOOM

- Berners-Lee's proposal = foundation of the web
 - A shift from static, text-only screens → to a linked, visual, interactive world
 - Set the stage for the 1990s web revolution
- 

"The Web does not just connect machines, it connects people."

Tim Berners-Lee

THANK YOU
